

**FIRE
PROTECTION
COATINGS FOR
WOOD**

Imagine if there had been a fire retardant paint that allowed you to plan, draw and decorate completely freely without compromising on design.

It exists

We at Protega have been manufacturing world-class fire protection since 1988. Our products are sought after for their high quality and high environmental standards.

We build more and more in wood and there are many good reasons for choosing wood materials. Cost, quality and the environment are probably among the most important. It also looks good and provides healthy buildings to stay and live in. In addition to this, it is important to ensure an attractive sustainable fire protection system so that the building also is safe.

With our coatings, you can choose between keeping the beautiful wooden feeling with a transparent coat that can also be tinted in different tones, a covering paint in any colour of your choice or painting over already painted walls, ceiling or load bearing wooden structures.

Our fire protection coatings meet the highest fire class for surface coatings on wooden materials B-s1,d0.

Fire Rated Coatings for indoor wood to achieve B-s1,d0

PROTEGA WOOD-C

A transparent waterborne fire rated coating for untreated light coloured wood materials. Can be tinted to different colours. Topcoat, Protega Topcoat C.

PROTEGA WOOD-S

A covering waterborne fire rated coating for untreated wood materials. Protega Wood-S is white or whitewash (10% white). Can be tinted to different colours. Topcoat, Protega Topcoat W.

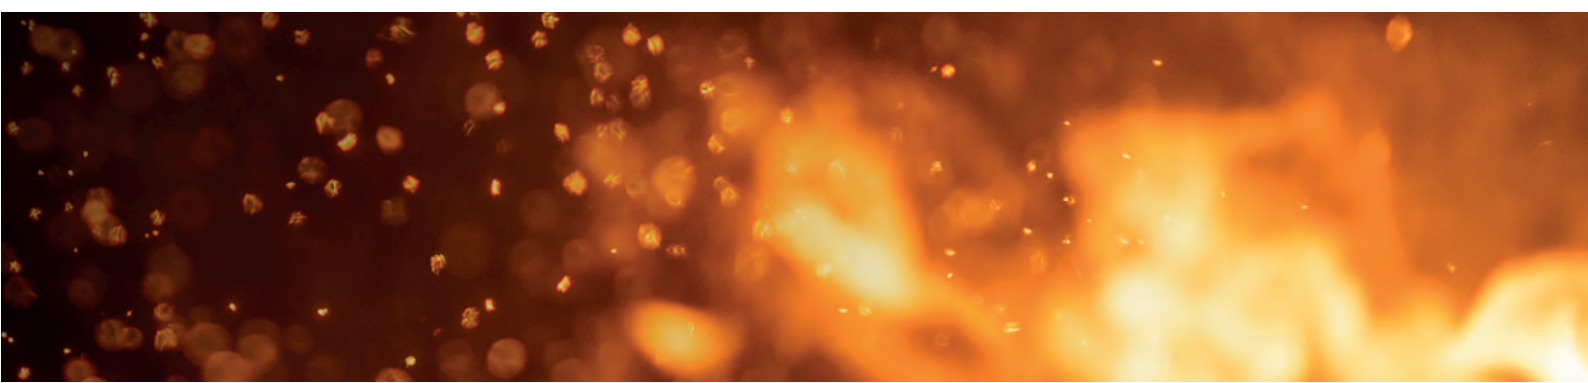

NOVATHERM 1FR

A transparent waterborne fire rated coating for untreated wood materials. Note, that it must be sealed with Protega Top 1FR, Eco which is a bio-based solvent-borne topcoat.

PROTEGA UPGRADE

A white covering fire rated coating that upgrades previously painted surfaces to fire class B-s1,d0. Perfect solution for repainting and also allows for the reuse of previously painted wood material.
